

Tamper-evident sterile, single-use breast milk storage solutions for neonatal units and milk banks.

The AXifeed bottle and cap range is the only comprehensive, truly tamper-evident system, providing clear verification and where feeds are safeguarded from accidental or deliberate contamination.

Whether used for delivering mother's own milk, donor milk or special feeds, the highest level of protection is assured for newborn, premature and babies in need of extra care.

Tamper Evident

Our colour-coded cap system ensures the integrity of the feed from source to baby. Simply open the bottle to break the seal, unscrew the lid, pull away and discard the seal. To re-tamper proof, push a new sterile lid firmly down on to the bottle and screw tight.

Sterile Packaging

All bottles removed from the sterile pack have visual tamper evident bands. The bottles are sterile, safe and ready to use. Once filled, bottles can be resealed with colour coded sterile caps denoting:

Blue: Donor breast milk
Peppermint & Yellow: Breast milk and / or special feeds

Product Information

- Freezer safe down to -40c
- Bisphenol A and Phthalate free
- Fully compliant with EU Directive
- Manufactured, designed and sterilised in the UK
- Clearly and accurately calibrated
- Peace of mind for transporting feeds
- Colour-coded, re-sealing caps
- Batch numbered and traceable for safety
