Warming Cabinets

Maintaining the highest
standards of patient care

Fluid, blanket and combination warming – for flexible use

Patient and fluid warming reduces the risk of perioperative hypothermia and helps keep patients comfortable.

In fast paced clinical settings, dependable temperature management is a key part of safe, effective care. Our fluid and blanket warming cabinets are selected to support both NHS and private hospitals, bringing together trusted brands and proven performance. Built for the demands of busy clinical environments, each unit offers strong construction, long service life, and efficient running costs. Whether used in theatres, recovery, maternity, or ward areas, these warming solutions deliver consistent, compliant performance that clinical teams can rely on to maintain the highest standards of patient care.

Tabletop Cabinets
